Diagram applies to Type-C installations as well as to Type-H & Type-W, as shown, provided the red lead (center pin in Type-C) is connected to E+.

**Legends:**
- **Excitation:** E+ & E-
- **Signal:** S+ & S-
- **Rm:** Matched Resistors
- **Rdg:** Dummy Gage Resistor

**Note:** Increasing tension strain in gages induces an increasing signal of positive polarity.

Special strain gage with half the grid installed 180° opposite the other half minimizes stray bending effects.
